The Florida State Emergency Response Team

September 22, 2017 - Published at 1400hrs

State Emergency Operations Center Activation Level: 2

Reporting Period: Sept. 23, 2017 0700hrs – Sept. 23, 2017 1900hrs

Information Current as of 1200hrs

Updated Information in Red

CURRENT SITUATION/ WEATHER SUMMARY:

Scattered showers and thunderstorms are expected statewide today, primarily this afternoon and evening. Some scattered showers have already developed over the Florida East Coast, and this activity will gradually progress westward throughout the day, spreading into the Panhandle. Rainfall amounts are forecast to be between ½ and 1 ½ inches with the highest amounts in east Central Florida. Locally heavy rainfall is also possible in east Central Florida and could cause localized nuisance flooding of low-lying or poorly drained areas. There are no flash flood watches in effect. Highs will be in the mid to upper 80s throughout the state; heat index values in the mid to upper 90s are expected in some South Florida locations. Tonight, a few isolated showers and a storm or two may linger in the Panhandle and along the East Coast until midnight, but dry conditions are otherwise expected across the state under partly to mostly cloudy skies. Lows will be in the upper 60s to lower 70s in North Florida and in the mid to upper 70s in Central and South Florida.

Hurricane Maria does not pose a direct threat to Florida, but increased waves from Maria are reaching the Florida East Coast today and could result in additional coastal erosion.

River flooding continues across the Peninsula, but most rivers are falling. It will be several days to weeks before most river levels fall below flood stage.
