Hurricane Irma

The Florida State Emergency Response Team

September 26, 2017 - Published at 1300hrs

State Emergency Operations Center Activation Level: 2

Reporting Period: Sept. 26, 2017 0700hrs – Sept. 26, 2017 1900hrs

Information Current as of 1200hrs

Updated Information in Red

CURRENT SITUATION/ WEATHER SUMMARY:

Scattered showers and thunderstorms were ongoing across South Florida this morning, but they have since dissipated. Additional showers and thunderstorms will develop this afternoon across South Florida and the Keys. Widespread severe weather is not anticipated, but any thunderstorms that develop will be capable of occasional lightning, gusty winds, and locally heavy rainfall. Rainfall totals over the next 48 hours may top 1" across the Keys. Otherwise, mostly dry conditions are expected across the rest of the state under partly cloudy skies. High temperatures will be near to just above normal in the upper 80s to low 90s statewide. The Heat Index this afternoon will be in the upper 90s to low 100s across inland Central Florida, South Florida, and the Keys. Tonight, a few isolated showers or storms may linger along coastal regions, but dry conditions are otherwise expected across the state under partly to mostly cloudy skies. Lows will be in the upper 60s in North Florida, the low to middle 70s in Central and South Florida, and the low 80s across the Keys.

Maria has made its closest approach to Florida, so coastal conditions will continue to improve. Wave heights will range from 3-6' from Palm Beach to Nassau County and a high risk of rip currents continues for all East Coast beaches. Minor coastal flooding remains possible in Northeast Florida and along the St. Johns River and its tributaries and a Coastal Flood Advisory is in effect through tomorrow evening. Tides will run 1-1.5' above normal. River flooding continues across the Peninsula from Irma's rainfall, but most rivers are falling. River Flood Warnings continue for parts of the upper St. Johns, the Santa Fe, the Withlacoochee, the Peace, and Cyprus Creek. It will be several days to weeks before all river levels fall below flood stage.
